

Tropical Finfish and Crustacean Aquaculture:

Professional Short Course Series

Integrating Seed Production, Sustainable Farming, Health Management, and Smart Aquaculture Technologies

Thailand is internationally recognized as one of Asia's leading aquaculture producers, supported by advanced farming technologies, strong research institutions, and sustainable production systems. Building on this expertise, AIT Extension – in collaboration with AIT Aquaculture and Aquatic Resources Management (AARM) and FutureFish – offers a Series of Professional Short Courses, covering the entire aquaculture value chain from finfish and crustacean production to sustainable and climate smart farming practices. Designed to combine scientific knowledge with high-tech learning, these programs equip participants with practical skills that can be applied across diverse aquaculture systems worldwide.

1 week

TILAPIA FARMING

Seed Production, Grow-out,
and Health Management

11 – 17
October 2026

1 week

MUD CRAB HATCHERY AND FARMING

Hatching, Larval Rearing, Grow-out,
and Soft-Shell Crab Production

18 – 24
October 2026

1 week

SUSTAINABLE AND SMART SHRIMP FARMING

Integrating Eco-Friendly
Practices, Digital Tools, and
Climate-Resilient Technologies

29 November – 05
December 2026
